

Amanzou Amine

Senior Observability Expert

📍 Lyon, France 📞 (+33) 6 65 27 01 23 ✉️ amineamanzou@gmail.com

 [amineamanzou](#)

 [amineamanzou](#)

Expert in defining and deploying enterprise-scale observability strategies within critical, high-availability environments. Proven track record in structuring **Communities of Practice**, standardizing **DevSecOps** workflows, and driving the adoption of **AI-driven monitoring** (AI Ops). Adept at bridging the gap between legacy on-premise infrastructure and modern Cloud/SaaS architectures through **OpenTelemetry** standards and automation.

Professional Experiences

ENEDIS 03/2024 - 10/2025
Senior Observability Expert Lyon, France

Strategic overhaul of monitoring for a critical distributed system (Cloud/On-prem). structuring the governance and adoption for 400+ projects.

- **Community of Practice & Governance:** Acted as the central referent for observability. Defined the "Operating Rules" and best practices guides, facilitating workshops to align SRE, Dev, and Ops teams. Structured the onboarding process to ensure all teams adopted the new observability standards.
- **Hybrid Observability Strategy (Cloud & On-prem):** Architected a unified observability platform (based on **OpenTelemetry**) to monitor a complex hybrid landscape (Kubernetes microservices & Legacy infrastructure).
- **Strategic Benchmarking & AI Ops Assessment (RFP):** Architected a dedicated **Infrastructure-as-Code (IaC)** environment to benchmark 7 major market solutions. Orchestrated **Chaos Engineering** campaigns to rigorously audit their **AI Ops** capabilities (automated anomaly detection, noise reduction, and root cause analysis), ensuring the selected platform met the highest standards of resilience and accuracy.

Technical Environment: *AWS, OpenStack, Kubernetes, HashiCorp Vault, Terraform, Ansible,, Kafka, GitLab CI, Grafana, Prometheus, Dynatrace.*

Ylio 01/2024 - 03/2024
Cloud Engineer Almada, Portugal

Supported the industrialization and production rollout of an e-commerce platform using **Infrastructure-as-Code** and **DevOps** best practices.

Technical Environment: *Terraform, Ansible, GCP, GitHub Actions, Docker Compose, Kubernetes, PostgreSQL, Nginx, Vault*

Odigo 10/2022 - 09/2023
Observability Expert Lyon, France

Migration of critical business applications to a high-availability SaaS platform.

- **CI/CD Integration & Automation (IaC):** Lead the "Observability as Code" initiative using **Ansible**. Integrated monitoring agent deployment directly into the CI/CD pipelines, ensuring that every new release was monitored by design.
- **Custom Metrics & Data Ingestion:** Developed custom solutions (Python/Docker) to ingest specific business metrics that standard tools could not capture.
- **Operational Excellence (MTTD/MTTR):** Optimized incident response workflows. The standardized dashboards and alerts enabled N1/N2 support teams to drastically reduce Mean Time to Detection and Resolution, directly supporting the **Operational Excellence** goals.
- **Support & Documentation:** Created comprehensive technical documentation and "How-to" guides for development teams, enabling autonomy in troubleshooting and performance analysis.

Technical Environment: *Dynatrace, Python, Ansible, AWS, Jenkins, GitLab, Docker, Jira, Confluence.*

Education

Udemy OTCA - OpenTelemetry Certified Associate Course	2025 Training	KodeKloud Kubernetes - CKA Training Course	2024 Training
Udemy AWS Certified Cloud Practitioner Course CLF-C02	2023 Training	ExamPro Hashicorp Terraform Associate Certification Course (003)	2023 Training
Zenika Kafka Confluent Administration	2019 Training	Zenika Elasticsearch Ops	2019 Training
Paris 1 Panthéon-Sorbonne University MIAGE - Computer Science Methods Applied to Business Management	09/2013 - 10/2016 Bachelor, Master	Paris-Est Créteil University Computer Science	09/2011 - 08/2013 DUT (University Technical Diploma)

Projects

Adoption OpenTelemetry at Scale - Enterprise Talks	2025
Invited talks and workshops for companies planning OpenTelemetry adoption at scale: governance models, ROI (MTTR), and migration strategies.	

Other Experiences

Orange Site Reliability Engineer / DevOps	2014 - 2021 Paris, France
Site Reliability Engineer for Orange's national mail service, ensuring the reliability of a mission-critical platform supporting 30+ million email accounts.	
Team Leadership – Led a 5-person engineering team: coaching, setting goals, improving on-call readiness and scaling the Elasticsearch/Kafka cluster. Change Management – Advocated and implemented the transition from Puppet to Ansible, reducing toil and speeding up configuration delivery. On-Call Operations – Directed 24/7 incident response and postmortems to maintain SLA compliance during a 4 years datacenter migration. Authored runbooks/OpDocs for the monitoring solution. Monitoring & Alerting – Deployed and optimized ELK and Grafana for application health and latency visibility. Reduced noise and MTTR by refactoring alerting rules and dashboard naming.	
Technical Environment: <i>Python, Ansible, Kafka, ELK Stack, Grafana, Bash, Gitlab, MySQL, OpenStack, RHEL.</i>	

Lacompany Backend Developer	2013 - 2014 Paris, France
Technical Environment: <i>Apache HTTPD, MySQL, PHP, Symfony 2, Git, CakePHP, Linux, Go, CouchDB.</i>
