

Amanzou Amine

Senior Observability & Agentic SRE Consultant

amineamanzou@gmail.com

Lyon, France

(+33) 6 65 27 01 23

amineamanzou.fr

Summary

13+ years of experience in production reliability and observability. From telemetry to diagnosis: observability strategy, OpenTelemetry pipeline architecture, and SRE agent development with Python and LangChain. I help teams select and integrate platforms and evaluate incident investigation capabilities, connecting production needs with technical decisions.

Work Experience

KeyIA

France

Observability & Agentic SRE Consultant

05.2026 - Present

OpenTelemetry pipeline architecture and SRE investigation agent development for a corporate and investment bank.

- Architected an OpenTelemetry ingestion pipeline on OpenShift/HyperShift: defined the target architecture and led alignment on agents and operators; routed logs through Kafka and managed traces and metrics.
- Developed a Python SRE agent with LangChain for end-to-end investigation, from VMs and guest operating systems to VMware virtualization (ESXi, vCenter), networking and storage.
- Correlated infrastructure context, Elasticsearch logs and Dynatrace metrics to assess diagnostic confidence and recommend targeted remediation.
- Evaluated the agent with IT teams: defined test scenarios, validated investigation capabilities and recommended improvements to VMware MCP services.
- Log as a Service: automated Fluent Bit deployment with OTLP and Kubernetes deployment of Data Prepper for OpenSearch ingestion; created a parsing catalog organized by technology profile.

Environment: Python, LangChain, MCP, VMware, OpenTelemetry, OpenShift, Kafka, Elasticsearch, Dynatrace, OpenSearch.

ENEDIS

Lyon, France

Observability Expert

03.2024 - 12.2025

Led the technical evaluation and target strategy for ENEDIS’s future observability platform serving 400+ projects.

- Led the technical workstream of a €15M tender, evaluating seven observability platforms against business, architecture, operations, security and cost criteria to inform solution selection.
- Translated the needs of development and infrastructure teams into evaluation criteria, technical specifications, SLOs and platform requirements.
- Architected a hybrid cloud/on-premises Kubernetes proof of concept to validate scalability, performance, telemetry pipelines and candidate solutions.
- Maintained Dynatrace Managed and Elastic log platforms in operational condition, collaborating with the teams responsible for the existing platforms.
- Architected a fully OpenTelemetry-based ingestion pipeline and planned migration to Elasticsearch, the selected solution, maximizing reuse of existing capabilities.
- Initiated change management with an observability maturity matrix covering 400 projects to structure their adoption roadmap.
- Created OpenTelemetry guides and training to support SRE, development and support teams in adopting the new observability foundation.

Environment: OpenTelemetry, Dynatrace, Elasticsearch, AWS, OpenStack, Kafka, Kubernetes, GitLab.

- Led a five-month migration to Dynatrace SaaS and established a standardized high-availability monitoring foundation.
- Worked with QA and integration teams to identify cross-system bottlenecks and improve application reliability through end-to-end observability.
- Developed containerized Python collectors and Jenkins pipelines for custom metrics ingestion.
- Automated Dynatrace agent configuration and deployment with Ansible and a dynamic inventory plugin, expanding monitoring coverage and simplifying onboarding and first-line incident diagnosis.

Environment: Dynatrace, Python, Ansible, Jenkins, Docker, AWS, GitLab.

Managed and optimized Elasticsearch, Kafka, Grafana, and MySQL; performed log analysis and troubleshooting, and automated recurring operations with Ansible.

Environment: Elasticsearch, Kafka, Grafana, MySQL, OpenStack, Python, Ansible, Terraform, RHEL.

Education

ClickHouse	Certification
ClickHouse Observability Professional	2026
Udemy	Training
OTCA - OpenTelemetry Certified Associate Course	2025
KodeKloud	Training
CKA Certification Course – Certified Kubernetes Administrator	2024
Paris 1 Panthéon-Sorbonne University	Bachelor, Master
MIAGE - Computer Science Methods Applied to Business Management	09.2013 - 10.2016
Paris-Est Créteil University	DUT (University Technical Diploma)
Computer Science	09.2011 - 08.2013

Skills

- Observability

OpenTelemetry, Dynatrace, Elasticsearch, Grafana, Kafka, Prometheus, Jaeger
- Agentic SRE

Python, LangChain, MCP, Deep Agents, Root Cause Analysis
- Platforms

Kubernetes, OpenShift, HyperShift, Docker, VMware vSphere
- Automation & IaC

Ansible, Terraform, Bash, GitLab CI, GitHub Actions
- Cloud & Infrastructure

AWS, GCP, OpenStack, Linux, VMware
